

Abies procera glauca (PINACEAE)

noble fir

Price	0.00 ₺
Category	Conifers
Sensitivity	-
Resistance to Cold	5A (-28.8_-26.2) °C
Heat Resistance	H3B (+35.2_+37.9) °C
Root Structure	taproot
Body Color	-
Soil Type	-
Durability	-
Plant Size	1-2 meters
Plant Growth	-
Autumn Color	Purple/Blue
Request Light	Sun

Leaf Status	Evergreen
Leaf Color	Blue/Purple
Flowering Period	-
Flower Color	-
Fruit Color	Purple/Blue

Abies is a pyramidal-shaped, spreading and evergreen tree that may reach up to 50 m tall in cool parts of the northern hemisphere. Lower twigs slightly overhang. Dark green, needle-like leaves are in whorl. There are two distinct stoma bands beneath the leaves. The leaves have acute tip or are with serrated margins; the cones are erect on the shoots. They grow well in warm climates but do not tolerate lime soil. They do well in high relative humidity during rainy and cool summer months. They do not need too much light and endure shadows. There are endemic varieties in Turkey. They are grown in parks, gardens, and alongside the roads.
