

Malus domestica (ROSACEAE)

Apple

Price	0.00 ₺
Category	Fruit
Sensitivity	-
Resistance to Cold	4A (-34.4_-31.7) °C
Heat Resistance	H3A (+32.4_+35.1) °C

Root Structure	Eaves rooted
Body Color	-
Soil Type	-
Durability	-
Plant Size	2-5 meters
Plant Growth	-
Autumn Color	Brown
Request Light	Sun
Leaf Status	Deciduous
Leaf Color	Green
Flowering Period	April
Flower Color	Multi colour
Fruit Color	Multi colour

Malus is a genus of about 35 species of deciduous shrubs or trees, native to Europe, Asia and North America besides temperate regions of northern hemisphere, growing up to 12 m. Showy flowers bloom prior to foliation in spring. The color of leaves turns to red in autumn. After flowering, fruits with vivid colors are produced. Malus prefers deep, humid, pervious and fertile soils. Fruitless species may be planted along the gardens or avenues while fructiferous trees can be used in orchards. They are used as ornamental plants in parks and gardens.
